

MOBILEASSURE™ CAPTURE

MobileAssure Capture is software designed for identity capture including biographic and biometric collection and submission. Well suited for both mobile and fixed environments MobileAssure Capture can be used for identity verification, enrollment, credentialing or any requirements needing to collect biographic and biometric information.

MobileAssure Capture is an all-in-one client based solution that gives the operator the opportunity to capture both biometric and biographic data in both a networked and non networked environment. Having off network capability allows for vital field versatility allows for convenient online submissions.

Biometric data can be collected using a variety of devices depending upon your requirements (fingerprint, signature, iris, facial, i9 documentation, etc) and is securely stored on standalone computer. This allows flexibility for submissions to a destination whenever connected to a network. All submissions are logged on MobileAssure Capture with the capability to access and run a variety of reports.

MobileAssure Capture is fully compliant with the latest FBI's Electronic Biometric Transmission Specification (EBTS) version 9.1 and can also support previous versions along with the capability to print fingerprint cards if needed. Mobile Assure Capture supports Windows 7, XP (32-bit and 64-bit).

MobileAssure Features and Capabilities:

- Live Scan Fingerprint Capture
- Electronic Signature Capture
- Scan FS8XXX FBI Fingerprint cards for electronic submission
